

summary of charges

a householder's guide

customer information 2007/2008

if you're not on a water meter

When the water we supply isn't metered, your charges have to be worked out based on the 1989/90 rateable value of your property. We use different charging zones to reflect different rateable values of similar properties in various areas. The map overleaf gives you a guide to which zone your property is in.

Our charges for 2007/2008 in each zone can be calculated from this chart.

| | unmeasured water supply | full unmeasured sewerage | used water | property surface water |
|------------------|-----------------------------------|-----------------------------------|-----------------------------------|-----------------------------------|
| charging zone | charge per £ of rateable value | charge per £ of rateable value | charge per £ of rateable value | charge per £ of rateable value |
| 1 | 85.47p | 80.15p | 50.94p | 29.21p |
| 2 | 76.92p | 67.50p | 42.93p | 24.57p |
| 3 | 74.59p | 71.12p | 45.04p | 26.08p |
| 4 | 77.93p | 77.11p | 48.95p | 28.16p |
| 5 | 89.60p | 89.97p | 57.04p | 32.93p |
| 6 | 93.20p | 87.13p | 55.28p | 31.85p |
| 7 | 93.84p | 84.91p | 53.89p | 31.02p |
| 8 | 74.59p | 70.62p | 44.55p | 26.07p |

water supply

The minimum charge for an unmetered water supply is £70.98, except for lock-up garages or car park spaces with rateable values between £1 and £30. Here, charges are calculated using the chart above.

sewerage

The sewerage charge depends on whether the property is connected to the sewer for used water, property surface water, or both.

- The full charge applies where both used and property surface water drain to the public sewer.
- The used water charge applies where there is no connection to the sewer for property surface water.
- Likewise, the property surface water charge applies where there is no connection for used water.

if you're on a water meter

You pay for your water based on the meter reading, which is also used in part to work out your sewerage charge.

Meters are fitted free, but there's an annual standing charge to cover metering, reading and billing costs.

- **Don't forget**, if you use a sprinkler, other automatic garden watering systems (including a perforated hose), or have a swimming pool using mains water, you need to have a meter fitted.
- **All new** properties will have one. Existing customers can also apply for a meter.

When you have a metered supply, these are the charges you will pay:

water supply

| | |
|------------------------------|-------------------------|
| measured water supply charge | 115.07p per cubic metre |
|------------------------------|-------------------------|

plus

| standing charges/minimum charges | | |
|----------------------------------|-------------------------|------------------------|
| size of meter (not exceeding) | standing charge* £pa | minimum charge* £pa |
| 15mm | 20.95 | - |
| 22mm | 29.96 | 99.66 |
| 30mm | 40.63 | 154.38 |

sewerage

- **First**, there's a measured sewerage charge to cover removing and disposing of used water from your property based on the meter reading.

| | |
|-----------------------|------------------------|
| volume related charge | 78.99p per cubic metre |
|-----------------------|------------------------|

plus

| standing charges | |
|----------------------------------|-------------------------|
| size of meter (not exceeding) | standing charge* £pa |
| 15mm | 11.05 |
| 22mm | 16.19 |
| 30mm | 21.75 |

* Charged pro rata on a daily basis.

- **Second**, there's a charge for where property surface water drains into our sewers. This is based on the 1989/90 rateable value of your property.

| charging zone | charge per £ of rateable value |
|---------------|--------------------------------|
| 1 | 29.21p |
| 2 | 24.57p |
| 3 | 26.08p |
| 4 | 28.16p |

| charging zone | charge per £ of rateable value |
|---------------|--------------------------------|
| 5 | 32.93p |
| 6 | 31.85p |
| 7 | 31.02p |
| 8 | 26.07p |

For new properties with no 1989/90 rateable value and household customers who choose to have a meter, there's a fixed charge based on the type of property.

| property type | property surface water £pa |
|------------------------|-------------------------------|
| 1 mainly flats/terrace | 25.77 |
| 2 mainly semi-detached | 51.66 |
| 3 mainly detached | 77.43 |

(If you're currently paying for property surface water based on rateable value, you can choose to switch to this fixed charge.)

Naturally, if your property's not connected to the public sewer for property surface water, then neither of these charges apply.

assessed volume charges

Household properties that have been substantially altered, making the rateable value invalid, will be charged on an assessed volume charge banded according to type of property. This charge also applies where customers wish to be metered but due to the practicality or unreasonably high cost, Severn Trent Water will not fit a meter.

| | water £pa | full sewerage £pa | used water only* £pa |
|--------------------------|--------------|----------------------|-------------------------|
| detached properties | 220.13 | 228.54 | 151.11 |
| semi-detached properties | 176.17 | 172.59 | 120.93 |
| other properties | 139.46 | 121.51 | 95.74 |

* Properties not connected for property surface water drainage will pay this charge.

This guide gives you a summary of how we calculate the charges we make for water services. Keep it handy for reference and if you need any further details, just call the local rate number on the back page.

our service to you...

We serve over eight million people across the heart of Britain. We supply drinking water to the highest standards in Europe – some two thousand million litres every day. We take away the used water and treat it again at one of over a thousand sewage works before putting it safely back into the environment.

We are investing more than £400 million a year to improve services to customers. This includes making even higher quality water available, improving sewers to stop flooding and cleaning up our rivers.

In fact, since privatisation we have invested over £6 billion – over £2,000 for each and every home we serve. As a result, customers are getting their best ever quality drinking water and supplies are secure irrespective of what the climate has in store. Hundreds of homes are safe from flooding as a result of improvements to sewers. Rivers in the Midlands are now much cleaner than before. This is thanks to our investment in new facilities for cleaning the community's used water.

Investment levels now are slightly lower than the years immediately after privatisation, when we had a number of major programmes which had to be completed quickly to make up for years of under investment. Nonetheless, we continue to spend at levels much higher than those seen in the days of public ownership. We will continue to spend money wherever necessary to ensure all our customers get high quality services, whilst keeping bills amongst the lowest in the country.
