

PLANT LIFECYCLE

Fill in the gaps using the words below to complete the plant's lifecycle.

seeds bulb ground
roots germinates shoots

1. The seed or _____ is planted in the ground.

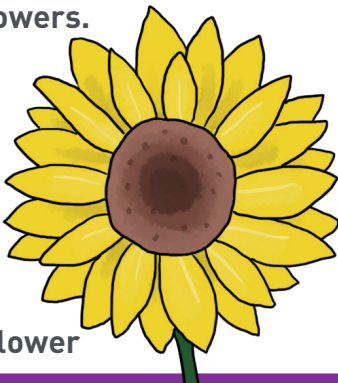

2. The seed _____ which means it starts to grow _____ and _____.
The roots grow below the soil and shoots grow up above.

3. The plants grow their own _____, which fall onto the _____ and the lifecycle starts again.

Do you have self-seeding plants or flowers in your garden?

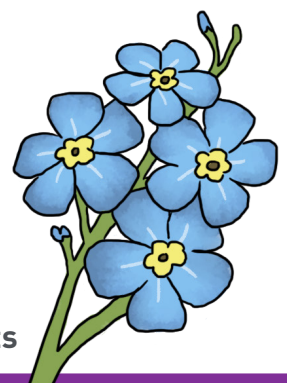

Self-seeding garden plants drop their seeds at the end of the season when they die and re-grow the following year. There are lots of plants and flowers that self-seed like Violets, Forget-me-nots and Sunflowers.
